## HTB Certified Penetration Testing Specialist (HTB CPTS)

HTB Certified Penetration Testing Specialist (HTB CPTS) is a highly hands-on certification that assesses the candidates' penetration testing skills. HTB Certified Penetration Testing Specialist certification holders will possess technical competency in the ethical hacking and penetration testing domains at an intermediate level. They will be able to spot security issues and identify avenues of exploitation that may not be immediately apparent from searching for

CVEs or known exploit PoCs. They can also think outside the box, chain multiple vulnerabilities to showcase maximum impact, and actionably help organizations remediate vulnerabilities through commercial-grade pentesting reports.

## Target Audience

- Junior Penetration Testers
- Penetration Testers
- Security Analysts
- Vulnerability Analysts
- Incident Handlers
- IT Security Personnel

## HTB CPTS – Key Differentiators

Find below the facts that differentiate HTB Certified Penetration Testing Specialist (HTB CPTS) from standard certifications:

**Continuous Evaluation** - To be eligible to start the examination process, one must have completed all modules of the "Penetration Tester" job-role path 100% first. Each module in the path comes with its own hands-on skills assessment at the end that students must complete to prove their understanding of the presented topics. The answers to the skills assessment exercises are not provided. Evaluation takes place throughout the journey, not only during the examination!

**Hands-on & Real-world Exam Environment** - HTB Certified Penetration Testing Specialist (HTB CPTS) candidates will be required to perform actual web, external, and internal penetration testing activities against a real-world Active Directory network. HTB certifications are not based on and do not include multiple-choice questions!

**Outside-the-box Thinking & Vulnerability Chaining** - HTB Certified Penetration Testing Specialist (HTB CPTS) candidates will be required to think outside the box and chain multiple vulnerabilities to achieve the exam's objectives. Like in real-world engagements, creativity, and in-depth knowledge will be necessary for a successful outcome.

**Commercial-grade Report Requirement** - Successfully completing all penetration testing activities is not enough to obtain the HTB Certified Penetration Testing Specialist (HTB CPTS) certification. Candidates will also be required to assess the risk at which the tested infrastructure is exposed and compose a commercial-grade report as part of their assessment. HTB Certified Penetration Testing Specialist (HTB CPTS) candidates will have to prove they are market-ready and client-centric professionals.

**Seamless Experience Powered By Pwnbox** - The entire exam and certification process can be conducted through the candidate's browser, from start to finish. All penetration testing activities can be performed via the provided and in-browser Pwnbox. There are no infrastructural or tool requirements.

## Knowledge domains

HTB Certified Penetration Testing Specialist (HTB CPTS) evaluates the candidates' knowledge on the following:

- Penetration testing processes and methodologies
- Information gathering & reconnaissance techniques
- Attacking Windows & Linux targets
- Active Directory penetration testing
- Web application penetration testing
- Manual & automated exploitation
- Vulnerability assessment
- Pivoting & Lateral Movement
- Post-exploitation enumeration
- Windows & Linux Privilege escalation
- Vulnerability/Risk communication and reporting

## The Exam

The candidate will have to perform blackbox web, external and internal penetration testing activities against a real-world Active Directory network hosted in HTB's infrastructure and accessible via VPN (using Pwnbox or their own local VM). Upon starting the examination process, a letter of engagement will be provided that will clearly state all engagement details, requirements, objectives, and scope. All a candidate needs to perform the required penetration testing activities is a stable internet connection and VPN software. HTB Certified Penetration Testing Specialist is the most up-to-date and applicable certification for Penetration Testers that focuses on both penetration testing and professionally communicating findings.
